## 1 Data Visualization for Political Social Work

## 2 How to Navigate This Presentation (scroll down □)

### 2.1 Navigation

- **o** for outline
- **f** for full screen

- alt-click for zoom

### 3 Basic Considerations (scroll down ☐)

#### 3.1 The Nature of Your Variables Determines the Nature of Your DataViz

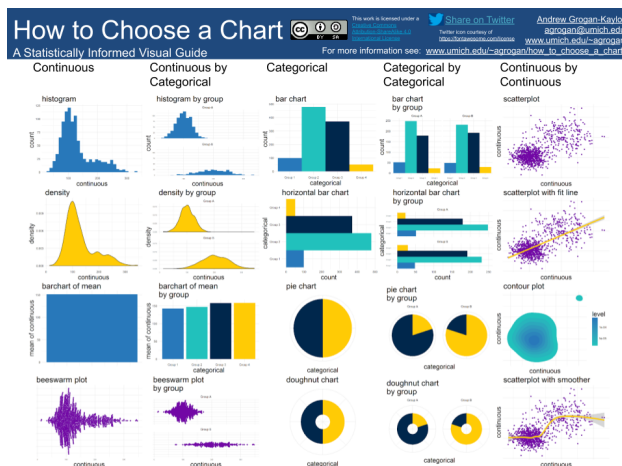

- Deciding upon the right data visualization to represent your data can be a daunting process.
- I believe that a *starting point* for this thinking is some basic statistical thinking about the *type* of variables that you have.
- At the broadest level, variables may be conceptualized as *categorical* variables, or *continuous* variables.

#### 3.2 Variable Types

- *categorical variables* represent unordered categories like *neighborhood*, or *religious affiliation*, or *place of residence*.
- *continuous variables* represent a continuous scale like a *mental health scale*, or a *measure of life expectancy*.

#### 3.3 Visualization Possibilities

##### How To Choose A Chart

## 4 Story-Telling (scroll down □)

### 4.1 Your Graph Should Be A Self-Contained Story

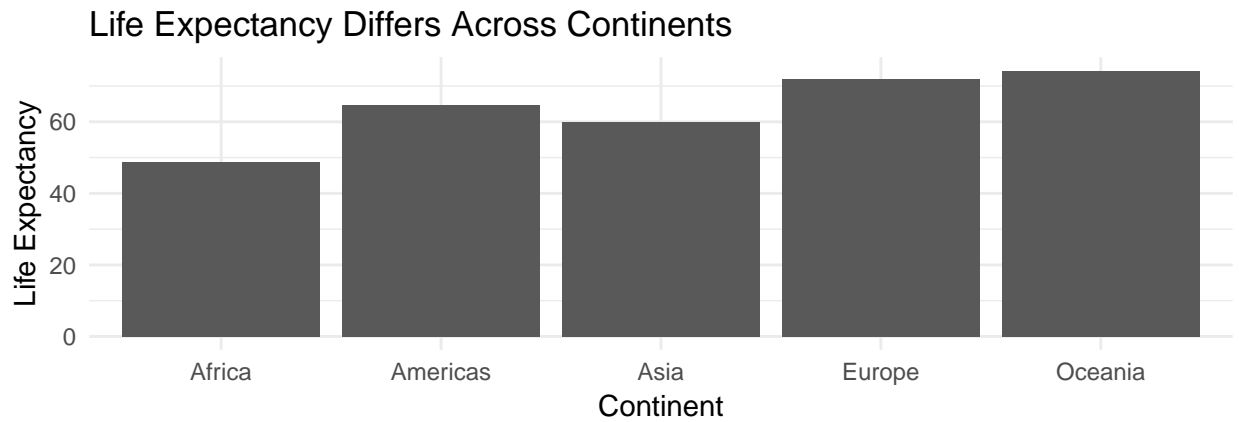

### 4.2 Your Graph Should Be Embedded In A Story

## 5 Color (scroll down □)

### 5.1 Greyscale Graph

### 5.2 Color is Organizational Identity

### 5.3 Color Is Information

### 5.4 Color Is Accessibility

### 5.5 Color Is Emphasis

## 6 Cognition (scroll down ☐)

### 6.1 “Graphical Perception”

“Ordering elementary tasks by accuracy (Cleveland and McGill 1985):”

1. Position along a common scale
2. Position on identical but nonaligned scales
3. Length
4. Angle & Slope
5. Area
6. Volume, Density, Color Saturation
7. Color Hue

### 6.2 Example (Position Along A Common Scale)

### 6.3 Example (Length)

## 6.4 Example (Angle)
